

Knot DNS

High-performance authoritative DNS server

Ondřej Surý & Alix Guillard • 12.12.2013
<knot-dns@labs.nic.cz>

What is Knot DNS?

- Authoritative(-only) DNS server
- Open source – GPLv3
- Current stable branch: v1.3.x

Project history

- Fall 2011 – Public beta release
- Spring 2012 – Knot DNS 1.0
- Fall 2012 – Knot DNS 1.1
 - Massive transfer (IXFR) speedups
 - Reference manual!
- Spring 2013 – Knot DNS 1.2
 - Dynamic updates, Response Rate Limiting
- Summer 2013 – Knot DNS 1.3
 - Parser rewrite (Flex/Bison → Ragel)
- Winter 2013 – Knot DNS 1.4
 - DNSSEC signing!

Design goals

- Open-source authoritative-only DNS server
 - Developed in an open way (we do not hide our mistakes)
- Usable for everybody (root zone, TLDs, massive DNS hosting)
- Fast(est), feature-rich
 - Very close to the theoretical limits of the platform (trafgen)
 - 550+kpps on 10GbE
 - <https://www.knot-dns.cz/pages/benchmark.html>
- On-the-fly reconfiguration
- Portable, modular
 - Linux, *BSD, MacOSX
 - Portability mainly depends on userspace-rcu library

Standards compliant

- AXFR/IXFR (both master and slave)
- All known RR Type support
 - Including TYPEEnnnn \# (RFC 3597)
 - Even some obsolete types
- DNSSEC with NSEC3
- TSIG supported
- Root zone support
- NSID support (RFC5001)
- Fast track new standards

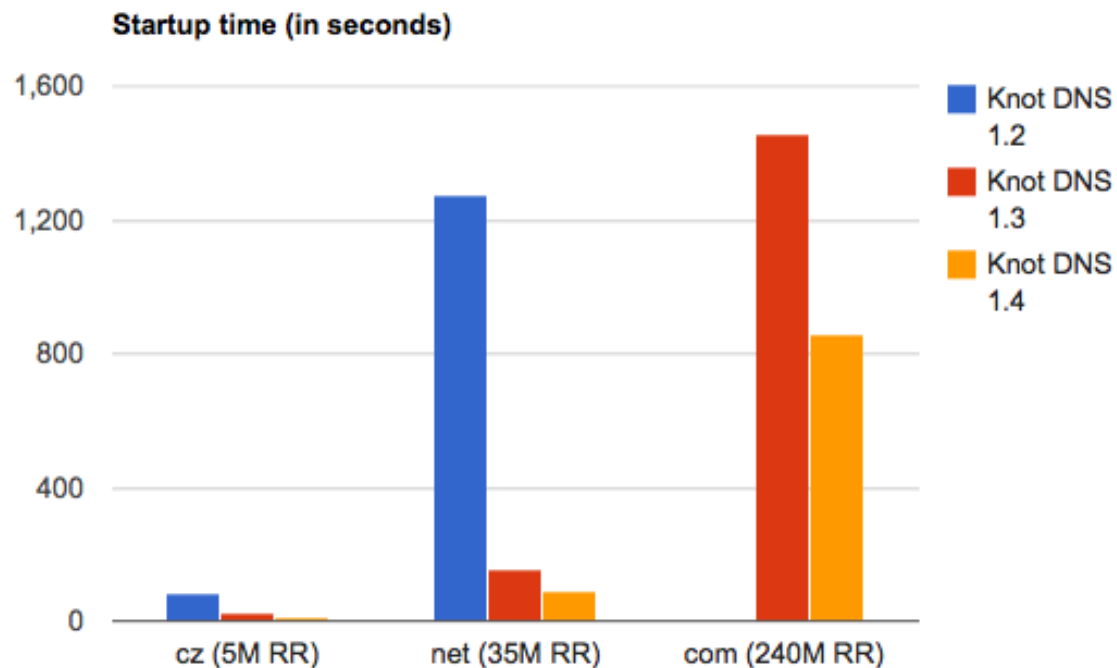

Configuration

- Curly braces and semicolons (C-like)
 - Interfaces (IPv4 or IPv6)
 - Remotes (masters or slaves)
 - Zones
 - Keys (TSIG)
- Logging (syslog or file-based)
- Very simple DNSSEC setup and configuration
 - Create the keys

```
# mkdir /etc/knot/keys
# cd /etc/knot/keys
# dnssec-keygen -a RSASHA256 -3 jsres.org
# dnssec-keygen -a RSASHA256 -fk -3 jres.org
```
 - Configure the zone

```
zones {
  dnssec-keydir "/etc/knot/keys";
  zone "jres.org" {
    dnssec-enable on;
    file "/etc/knot/zones/jres.org";
  }
}
```

Startup time [s]

Memory consumption [GiB]

Known deployments

- .CZ (+ several small zones) – anycast cloud
- .DK – slave server
- NIX.CZ – AS112
- hosting90.cz, igloonet.cz (50-100k domains)

Planned deployments

- L-ROOT (ICANN)
 - Huge anycast farm for l.root-servers.net.
 - <http://goo.gl/1aLfMT>
- RIPE NCC – TLD slave
 - <http://goo.gl/WW31k>
- .RU
- Other gTLDs: .UA, .SE, .UK
- More Czech registrars

Pre-packaged Knot DNS

- Debian
 - Unstable/Testing(Jessie)
 - Backports (Wheezy)
- Ubuntu PPA
 - ppa:cz.nic-labs/knot-dns (all supported releases)
- FreeBSD
 - <http://www.freebsd.org/cgi/cvsweb.cgi/ports/dns/knot/>
- Fedora
 - Knot DNS is part of Fedora Project
 - <https://admin.fedoraproject.org/pkgdb/acls/name/knot>
- OpenSUSE
 - Official packages
 - OpenSUSE Build Service / OpenSUSE Factory
 - <http://software.opensuse.org/package/knot>
